PLEASE RETURN YOUR REPLY TO  
THE DISTRICT CHIEF ENGINEER  
DOMINION WATER POWER BRANCH  
25 JACQUES STREET, S.E.  
VANCOUVER, B.C.

DEPARTMENT OF THE INTERIOR  
CANADA

PLEASE REFER TO ONE SUBJECT IN A  
LETTER, AND IN YOUR REPLY QUOTE  
FILE NO.

DOMINION WATER POWER BRANCH

VANCOUVER, B.C. July 24th, 1920.

Sir,

Progress report of Indians Water Rights  
Investigations and construction of works for  
quarter ending 30th June, 1920.

The work of Mr. Balls party has included the  
reserves on both sides of the Thompson valley in the  
vicinity of Spences Bridge. Following the Nicola Valley  
from this point, reserves were covered throughout the  
Nicola district with the exception of a few reserves  
regarding which the Board of Investigation have intimated  
that, no further information is required. The remainder  
of the Reserves in the Kamloops Agency, situated along  
the Shuswap and Adams Lakes, will be covered later in the  
season after field work has been completed in the Okanagan  
Agency. Following is a list of reserves on which field  
investigations have been made this season.

Coldwater No. 3 - Meadow I.R.

During April and May, Mr. Phillips supervised the construction of the Cayoosh - Copeland joint ditch, the joint portion being completed May 14th and the Paynter portion May 31st, with water running to Copeland Ranch on that date. The unseasonable weather in the early part of April with snow and cold approaching to zero temperature, made the excavating more expensive than was expected and another delay was caused by the difficulty in securing lumber for the flumes owing to which it was necessary to pay off the Indians on 14th April and re-engage them on April 20th.

On May 20th Mr. G. B. W. Nelson, assistant and foreman interpreter, left Lillooet for Alkali Lake with camp equipment to meet the Indians as had been previously arranged.

The early part of June was taken up with removing the timbers of the Indian dam at Alkali Lake, excavating through the earthwork of dam for pipe, hauling sand and gravel, sawing and hauling lumber for platform and gate tower.

Up to

Up to the end of June 75% of the earthwork was in place, pipe laid complete, with headgates set and water running through pipe. The water was kept running continuously through the Indians sluiceway which caused no interference with the irrigation, and part of the creek was diverted around the dam in a ditch, some of the water being used for the puddle core wall and the remainder returned to the creek again below the dam.

After Mr. Phillips set out the necessary centre line and slope stakes, also excavation and concrete levels for pipe he ran a trial line for ditch on Anaham Reserve from Chilcotin River, finding that a grade of 2.5 feet in 5000 (0.05%) would require a ditch 4.6 miles long. The grade provides a feasible location, but owing to some prohibitive side hill, will necessitate about 75% flume on account of the very sandy nature of the soil. Before a complete report covering the entire situation at Anaham can be secured, surveys for storage in the lakes tributary to Anaham creek and also Alexis Lake, should be made. This reserve includes the widely known Anaham Flat of about 3000 acres of excellent agricultural land. The expense necessary to provide irrigation for the entire flat is considered well warranted by the acreage and quality of the soil.

Your obedient servant

District Chief Engineer.

J. B. Challies, Esq., C.E.  
Director,  
Dominion Water Power Branch  
Department of the Interior,  
Ottawa, Ont.
